

SAFETY & LIGHTING SURVEYS

HOW SAFE ARE YOUR ATMS?

ARE YOUR BRANCHES PROVIDING SUFFICIENT LIGHT FOR THE SAFETY OF YOUR CUSTOMERS AT NIGHT?

Many states have ATM lighting laws and regulations. Not only is it a legal requirement, but it can also help lower crime rates. Most states require a safety & lighting check around an ATM to prove that it meets various “Lumens” or brightness values to ensure enough light to give your customer a safe environment to access an ATM at night. All of our technicians are trained and certified to provide detailed lighting and safety surveys.

SAFETY SURVEYS

Stickydata provides safety surveys with regular checkups. Mirrors, cameras and landscaping components in the ATM environment are checked. Have seasonal changes affected landscaping? Detailed reports contain photos that show all angles and areas of concern.

SAFETY
Passed

Reasons:

Is there a security notice posted near the ATM?
YES

Is there overgrown landscaping near the ATM or ATM entrance?
NO

Are mirrors installed on the ATM?
YES

Are there surveillance cameras monitoring the ATM area?
YES

SAFETY MEASUREMENTS

PASSED

A thumbnail of a safety survey report. It features a green vertical bar on the left with the word 'PASSED' written vertically in white. The main content area is white and contains the following elements: the title 'SAFETY Passed' in bold black and green text; a section titled 'Reasons:' with four questions and their corresponding 'YES' or 'NO' answers; four small photographs showing an ATM area, a receipt, the ATM itself, and a surveillance camera; and a small map at the bottom titled 'SAFETY MEASUREMENTS' with a color-coded legend.

LIGHTING SURVEYS

FAILED

LIGHTING Failed

Reasons:

- The Illumination at or within 50 feet of the ATM or ATM entrance is less than 2 foot candles.
- The Illumination at or within 50 feet of the ATM or ATM entrance is less than 2 foot candles.
- The Illumination at or within 50 feet of the ATM or ATM entrance is less than 2 foot candles.
- Within the parking area the Illumination at or within 60 feet of the ATM or ATM entrance is less than 1 foot candle.

Lighting Not Working

Item No.	Type
1	Street Light

Lighting Replacement: None

Replaces (LUM) non-regulated Lighting Fixtures as Part of this Survey

LIGHT METER ASSET NUMBER LIGHTING DIAGRAM

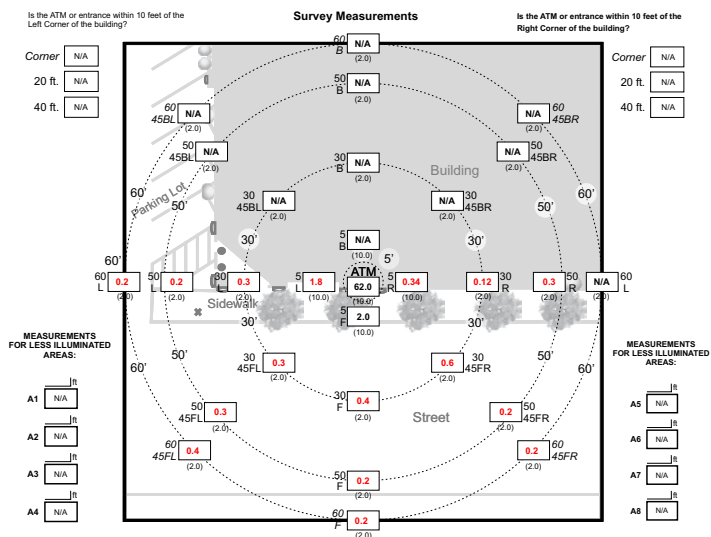

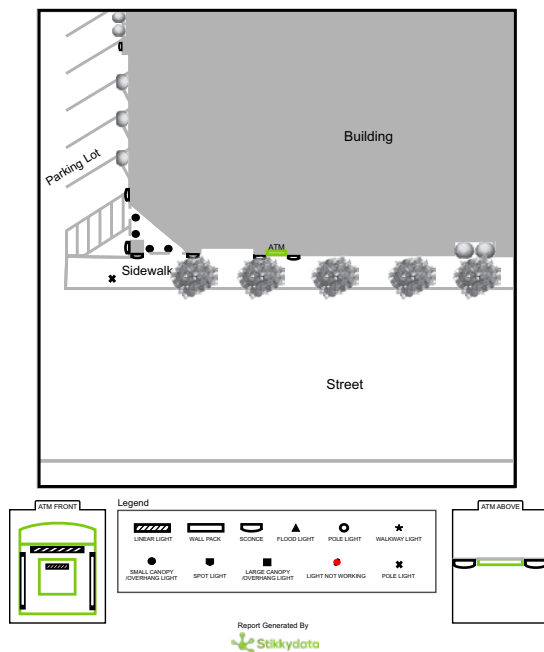

All ATM area lighting is checked for proper functionality. Deficiencies are identified, photographed and everything uploads seamlessly into Stickydata for easy management.

Illumination values determined from the ATM face to 60' out in all directions using calibrated light meters. Non-working light fixtures are documented. Site diagrams, overview drawings and comprehensive photos show problem areas and contextualize the data. The report is simple and concise, clearly highlighting deficiencies.

NIGHTTIME LIGHTING SURVEY CAD DRAWINGS

All Nighttime Lighting Surveys include a detailed CAD drawing of the area indicating the area and light brightness. All lights are visually documented, showing burned out or low light issues. Also, Safety areas are identified so that they can be addressed. These reports are shown in Stickydata and as PDFs if required by a regulative entity.
